

DEAL SOURCING FOR EQUIPMENT FINANCE

High-intent leads for your origination desks.

Quintel is a market intelligence engine that reads **millions of public filings** and surfaces the companies showing buying signals, matched to what your firm funds, while the deal is still open.

July 2026

WHAT YOUR DESKS GET

Every call goes to a **name worth calling.**

Higher-intent names

Companies carrying a real buying signal in the public record: a contract won, a permit issued, a facility going up, financing running down. Not a size filter. A reason to call.

Surfaced before anyone else

Signals hit your list the day they hit the record, so your rep gets there first instead of dialling the same names every other lender already bought.

Ranked by priority

Every company is scored on signal strength, corroboration across sources, and fit to what your firm funds. Reps start the day at the top.

THE TIMING ADVANTAGE

Signal hits the public record

A permit lands, a contract is awarded, a filing ages toward its end

Quintel surfaces it, ranked

Matched to your buy box, scored, with the evidence attached

Your rep calls first

The conversation happens while the capex decision is still open

Months later, it goes public

The announcement runs and every other lender hears about it at once

THE ENGINE

What you fund plus public signals, **synthesized into one list.**

WHAT YOU FUND

Your buy box

Sectors, ticket range, company size, geography, contact requirements. Set once with your team and tuned any time. Nothing surfaces that your firm could not fund.

PUBLIC MARKET SIGNALS

Scattered across thousands of sources

Awards, permits, financing filings, expansions, market news. The buying intent is out there, but no rep has time to find it across millions of records by hand.

WHAT YOUR TEAM GETS

A ranked, high-intent lead list

One list, scored and explained, refreshed through the day as new signals land. Every row carries the trigger behind it and a link to the source document.

SIGNALS SCANNED CONTINUOUSLY

Federal & state contract awards

Construction & air permits

Financing renewal timing

Facility expansions

SEC filings

State incentive awards

New locations & leases

+ dozens more public sources

TIMING

Timing your competitors **don't have.**

Know who committed to the equipment

A company commits long before it shops for financing. The permit is filed, the contract is won, the site work starts. Each of those is dated and public, months ahead of the press release.

Those names reach your reps inside that window, with the evidence attached, while the conversation is still worth having.

A bought list shows you what already happened. This shows you what is about to.

Every name comes with the why

Each company ships with its evidence trail: the score, the signals behind it, and a link to the public source. Reps know exactly why a name ranks before they dial.

Works alongside ZoomInfo

Intent data infers from browsing behaviour, which is why it surfaces companies that are not equipment intensive. Quintel reads the record itself. Different mechanisms, different lists. Run both.

WHAT LANDS ON YOUR LIST

Every lead arrives **ready to dial.**

FROM A RECENT RUN

Blue Cord Design & Construction, LLC

Construction · Florida

THE SIGNAL

Awarded a **\$15.1M federal construction contract**, July 2026.

WHY YOUR REP CALLS

A company that just won an eight-figure job has to mobilize: machines, trucks, crews, timelines. The financing conversation happens now, not after the equipment is already on site.

THE EVIDENCE

Linked source: usaspending.gov award record

Delivered with

Decision-maker contact: name, title, mobile, office line, email.
Company profile and estimated ticket range.

Where it lands

Straight into your CRM or exported as CSV, alongside everything else surfaced that day.

Filtered how you work

Sector, ticket size, company size, geography, contact completeness. If it matters to how a desk picks a name, it can be a filter.

IF YOU HAVE ENGINEERS

Build the tool **only you can build.**

TRUE

A working version is weeks, not months

Pointing a model at a data source and scoring companies against a buy box is a short project now. Any competent team gets a useful v1 standing up.

NOT IN THE ESTIMATE

The second year, and the one after

There is no federal registry. Company and lien records sit in fifty-odd state systems with their own formats, and permits are county by county.

Joining them is the work. One company appears under three names across a filing, an award and a news item, and nothing reconciles them for you.

THE BETTER USE OF THAT ENGINEER

The things nobody can sell you

Your credit process. The time from application to spread. That work compounds into an advantage that belongs to you.

A public record corpus does not. It is the same corpus for everyone who builds it.

It is not either-or. Everything Quintel surfaces **comes out as data you own**, so whatever your team builds on top of it starts with the corpus already assembled.

GETTING STARTED

More funded deals from **the same dial count.**

STEP 1**Set your criteria**

Sectors, ticket range, titles, contact requirements.
The engine only surfaces deals your desks can actually fund.

STEP 2**Put it on the phones**

Your reps work a live, ranked, fully enriched feed.
We review what connected and retune together, so the list gets sharper every week.

STEP 3**Own the timing window**

Every desk works names surfaced ahead of the market, first in on deals your competitors' lists haven't printed yet.
