

Entities, layers and perimeters — the reference grid

The reference grid for every flow in this document. Rows are layers, from bank accounts down to user wallets; columns are jurisdictions. Fiat and customer funds are held only inside the regulated perimeter; RebelFi sits outside it as a non-custodial layer.

C

custodial — entity holds customer funds

N

non-custodial — no entity can move the funds

A

admin-only — deploy/upgrade keys, cannot move funds

MTL

leg requires a money-transmission licence

KYC

identity checkpoint

KYT

transaction screening

	CANADA	UNITED STATES
A · Fiat / banking Bank accounts and payment rails. No crypto.	Netcoins Canada — CAD accounts C Domestic Canadian rails (Interac, EFT).	US bank partner — USD virtual accounts C 21 Domestic US rails (ACH, wire). Virtual account per customer. Assumed
REGULATED PERIMETER — LICENSED ENTITIES		
B · Licensed / custodial Conversion, custody, transmission.	Netcoins Canada C MTL Registered Canadian crypto trading platform. Custody, CAD on/off-ramp for Canadian customers. Canadian leg of cross-border flows 26 Through Netcoins Canada custody, or a non-custodial path Open	Balance — US (Wyoming entity) C MTL Custody, trading, staking · on-ramp / off-ramp Money-transmission coverage in 40 states; remaining states 24 Relationship model — programme/agent vs customer 22 Netcoins USA C Liquidity path to Circle (mint / redeem, OTC). Role in these flows: liquidity, not transmission. Assumed 23
	Circle — USDC issuer C Mint / redeem against USD · CCTP for cross-chain transfers · outside the BIGG group	
OUTSIDE THE PERIMETER — REBELFI · NON-CUSTODIAL		
C · Orchestration RebelFi software and on-chain contracts.	RebelFi platform A API and orchestration layer Risk-policy engine — per-partner thresholds and protocol whitelists Ring-fencing (“clean room”) wallets — provenance-verified balances KYT CCTP relay · yield routing · operations console	On-chain components N Escrow contracts — permissionless, release on pre-set conditions Yield positions in whitelisted protocols — user- or partner-owned CCTP transfers — no custodian while in flight
D · User custody Who owns the wallet.	Customer self-custody wallets N Individual (B2C) or business (B2B) customer controls keys.	Partner-controlled wallets N Business partner holds keys on behalf of its own end users (B2B2B). Ring-fenced wallets N KYT Customer- or partner-owned; RebelFi enforces source-of-funds rules at entry.

OPERATING RULES APPLIED ON EVERY PAGE

- 1 · Every MTL leg sits inside the perimeter.

Fiat-to-stablecoin, stablecoin-to-fiat and fiat transmission run through Balance (US) or Netcoins Canada (CA).
- 2 · RebelFi is non-custodial.

Any routing that needs a custodial hop uses a licensed entity's wallet. RebelFi keys deploy and upgrade contracts only.
- 3 · Identity and money travel on separate paths.

The licensed entity is customer-of-record for every money leg; RebelFi holds verification status and reference IDs, not documents.

#	ITEM	SOURCE
21	US bank partner identity; virtual-account model assumed	BIGG
22	BIGG ↔ Balance relationship: programme/agent or customer — determines customer-of-record and whose KYC programme governs	BIGG / Balance
23	Which entity is the Circle counterparty	BIGG
24	States outside Balance coverage: geo-restrict or alternate partner	BIGG / Balance
25	Placement of the additional merchant-payments technology under evaluation	BIGG
26	Canadian leg: Netcoins Canada custody vs non-custodial path	BIGG / Netcoins

Onboarding and KYC — customer-of-record

In all three onboarding models the licensed entity is customer-of-record for every money leg, and identity data and money travel on separate paths. RebelFi receives a verification result and a reference ID, not documents. Grey dotted arrows are RebelFi instructions.

Model 1 · Direct, individual (B2C)

Customer onboards through a RebelFi-powered interface.

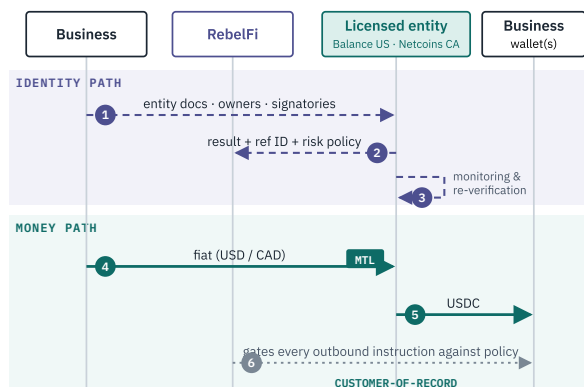

- Customer submits identity to the licensed entity's KYC programme **[KYC]**. Documents stay there.
- Result + reference ID returned to RebelFi, which stores status, tier and limits.
- Sanctions / PEP screening at onboarding; ongoing monitoring by the licensed entity **[KYT]**.
- Fiat legs: the licensed entity is customer-of-record **[C MTL]**.
- USDC delivered to a customer self-custody wallet **[N]**.
- RebelFi provisions the wallet and applies policy; optional ring-fencing at entry **[KYT]**.

?2 KYC-as-a-programme vs direct Balance accounts · **?7** customers resident in uncovered states

Model 2 · Direct, business (B2B)

A company — treasury, merchant or B2B payer — is the customer.

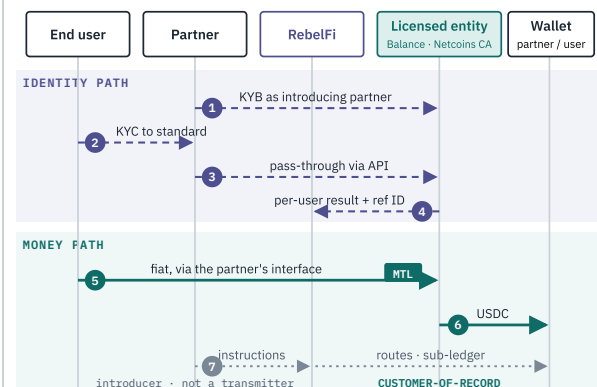

- Business submits entity documents, beneficial owners and authorised signatories to the licensed entity's KYB programme **[KYC]**.
- Result + reference ID to RebelFi, which records the approved risk policy: thresholds, protocol whitelist, permitted counterparties.
- Ongoing monitoring and periodic re-verification by the licensed entity **[KYT]**.
- Fiat legs: the licensed entity is customer-of-record **[C MTL]**.
- USDC delivered to business-controlled wallet(s) **[N]**.
- Policy engine gates every outbound instruction against the recorded policy.

?8 large business customers: Balance directly, or via Netcoins USA for OTC liquidity

Model 3 · Partner's end users (B2B2B, pass-through)

A payment network, fintech or marketplace brings its own end users.

- Partner completes KYB (as Model 2) and is approved as an introducing partner under the licensed entity's programme.
- Partner collects end-user KYC to the licensed entity's standard **[KYC]**.
- Passed through via API; end users become customers of the licensed entity.
- Per-user result + reference ID to RebelFi, mapped to partner sub-accounts under the partner's risk policy.
- End-user fiat legs: licensed entity is customer-of-record, partner is introducer **[C MTL]**. The partner is not a money transmitter.
- USDC to partner-controlled (omnibus + sub-ledger) or per-user wallets **[N]**; ring-fencing per sub-account **[KYT]**.
- End users transact in the partner's interface; RebelFi routes; the licensed entity settles.

?2 acceptance of pass-through KYC and its standard · **?9** omnibus vs per-user wallets for partners' end users

WHO HOLDS WHAT, AFTER ONBOARDING

PARTY	HOLDS	DOES NOT HOLD
Licensed entity (Balance / Netcoins CA)	Identity documents, KYC/KYB file, customer-of-record relationship, fiat balances, monitoring obligations	Control over non-custodial wallets or on-chain positions
RebelFi	Verification status, tier, limits, reference IDs, the customer's or partner's risk policy, wallet mappings	Identity documents, fiat, customer funds of any kind
Customer / partner	Wallet keys; (partner) its end-user relationship and interface	Money-transmission obligations for the licensed legs

ASSUMPTIONS TO VALIDATE · OPEN ITEMS ADDED

#	ITEM	SOURCE
A	The licensed entity's KYC programme is consumable via API with result-only return to RebelFi [Assumed]	Balance
B	Pass-through KYC (Model 3) is acceptable to Balance at a defined standard [Assumed]	Balance
?7	Treatment of customers resident in states not covered by Balance	BIGG / Balance
?8	Onboarding route for large business customers needing OTC liquidity	BIGG
?9	Omnibus vs per-user wallets for partners' end users	BIGG / Balance
